

EZE WILFRED OKWUDILI - COVER LETTER

Last updated: April 1, 2019

I have spent the past 10+ years studying, volunteering, interning with relevant organizations and working to acquire the requisite skills towards becoming a seasoned Analyst in cross-functional environment involving statistics, data and public policy for both private and public organizations. I have a bachelor's degree in Statistics, a Certificate in Data Analytics, Masters of Public Administration (MPA) and self-taught skills.

I have held job positions where I was engaged in data collection, relational-number crunching, data mining and analysis producing various kinds of solution-oriented graphs from static to interactive visualizations, and I am keen to continue developing my career in the field of statistical-data-policy analysis. I have always been a critical person, with very good statistics and computer skills. I work with a number of data management systems and software, including Ms Excel, SPSS, Ms Access, Tableau, MSSQL, a bit of arcGIS and basic exposure to Oracle-based Enterprise Systems. I am very good in statistical decision science involving test of significance, A/B testing, and data-driven optimization are the rhythm of the drumbeat I march to. I love Google; hence my expertise in Docs, Forms, Sheets, Analytics and Google Ads.

As much as I have interest in data manipulation, it is the analysis of data to bring meaning that drive organizational change, process improvement, operational optimization, public reporting and accountability that gets me going. I like to explore relationship between numbers and translate spreadsheets into stories. In a world of big data and interactive visualizations, these stories build scenarios that improve decision making; end result is improved services and or return on investments.

On a personal level, I am passionate about my work, I stay coordinated and pay good attention to details. I understand that communication is key collaboration with team of smart people. I am possessing as much quantitative knowledge as I do for qualitative reasoning, thus confident with numbers. The big part for me however is my interest in learning and continuous improvement.

You may take a look at some of my portfolio in this page. I'm open to collaborations and opportunity to learn, work together and grow. Get in touch.

Thanks for stopping by.
Eze, Wilfred Okwudili.
